WATERSHED CONDITIONS BULLETIN

DATE: April 14, 2008

TIME: 2:00 p.m.

Message sent on the basis of information received from:

**Kawartha Conservation Flood Forecasting Network
MNR – Surface Water Monitoring Center
Environment Canada
Trent-Severn Waterway**

Kawartha Conservation advises that the Flood Advisory has been **downgraded to a Watershed Conditions Bulletin**.

Water levels in rivers and streams throughout the Kawartha Conservation watershed are declining. This trend will continue throughout the week, as warm and dry weather is forecast for Southern Ontario.

The water level in Lake Scugog is expected to stabilize, since no additional runoff is predicted for the next 5 days.

As per the information from Trent-Severn Waterway, water levels in Balsam Lake, Cameron Lake, Sturgeon Lake and Pigeon Lake are expected to continue rising in response to the run-off generated from the melting snowpack at the headwaters of the Trent River system. Trent-Severn Waterway will continue to adjust water control structures along the waterway as per their management plan.

Kawartha Conservation is asking all residents to keep their children and themselves away from all rivers, streams and lakes, as well as water structures such as bridges and culverts, as they are extremely dangerous at this time of year.

Kawartha Conservation will continue to monitor the situation on a 24-hour basis and will apprise the public and watershed municipalities of any changes. If you are concerned about or are aware of flooding, please contact Kawartha Conservation at (705) 328-2271 or (705) 344-0155 after hours.
